ISA HyphaTrim Collection

Our DNA

Sustainability and responsible manufacturing processes have been at the core of our business model since LITE's inception in 2003. We built on this foundation with a separate business unit, COSM, to further explore biobased materials. COSM focuses on the development and production of new and sustainable plant based materials.

Our Commitment

- Utilize plant based materials which are biodegradable
- Ability to replace petrochemical based synthetics
- Production of COSM materials with circularity in mind

The Benefits

- Up to 100% Bio content which meets the necessary specs for apparel, bags and shoes
- Fully scaled in production in a wide range of color and weight options and at retail for major global brands
- Existing service infrastructure set up to aid both brands and factories
- Established, long-term factory relationships
- Pricing structure that is achievable and attractive for large scale projects

The Elephant in the Room

The term "Vegan Leather" has increased in popularity. Not only that the term Vegan leather is wrong and misleading, but also many of these materials are advertised as environmentally friendly, however, contain plastics. In contrast to genuine leather, vegan leather is one of the biggest threats to our planet. As an alternative to petro-based vegan leathers, our COSM materials offer another option to materials that can cause harm to our ecosystem.

• USDA Certified Biobased

The plant based components in our COSM materials are completely natural and allow the product to be classified as biobased. The biobased content has been 3rd party certified by the USDA.

**biobased content varies by article*

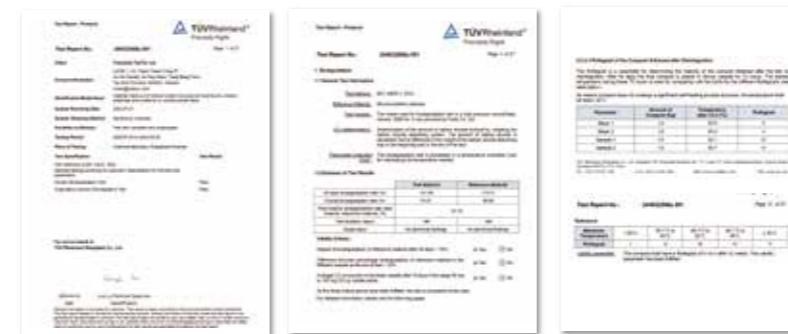

• FSC/VFSC Certified

All natural rubber, pulp & fiber units are Forest Stewardship Council certified with leading sustainable forestry practices stressing responsible sourcing of raw material from forests.

• Biodegradable

All natural components of our COSM Materials have been carefully selected in order to achieve biodegradability.

• Regenerative

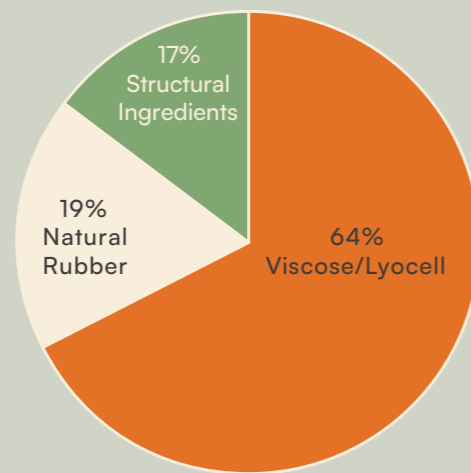

The regenerated cellulosic fibers are certified according to Oeko-Tex and TUV Austria OK scheme for biodegradability in soil, water and marine environments.

*Certification Deck available upon request

HyphaTrim TC Milled

HyphaTrim TC Milled is a 100 % biobased material made from certified natural latex, FSC®-certified regenerated cellulose fibers and contains mushrooms. ISA engineered these components to optimize HyphaTrim TC Milled to meet the physical properties required by the apparel, bags, shoes and accessories industry such as hand feel, softness, durability, breathability, and most important cost.
